ABOUT

B.Tech CSE (AI) student who's genuinely curious about how data and intelligent systems can solve real-world problems. My main interests are Artificial Intelligence, Machine Learning, and Data Analysis. I enjoy working with data, building models, and exploring new tools that make learning smarter and faster. I'm eager to keep growing my skills and contribute to impactful projects in AI

EDUCATION

2024 - 2028	Vishwakarma Institute of Technology , Pune	CGPA :- 8.65	Computer Science and Engineering (Artificial Intelligence)	
2023 - 2024	DR Mane Mahavidyalaya , Kagal		HSC Marks :- 74.33 %	MHT-CET Score:-97.97%ile
2021 - 2022	New English School and Jr. College ,Rendal		SSC Marks :-90.40%	

EXPERIENCE

AI-Bootcamp

Completed a 40-hour Bootcamp on Artificial Intelligence, conducted by [Vishwakarma Institute Of Technology](#) , Pune in collaboration with [C-DAC ACTS - Pune](#) and [FutureSkills Prime](#) (an initiative by MeitY & NASSCOM).

PROJECTS

1.AI College CAP Counseling Platform |

[GitHub](#)

- Developed an AI-powered web and mobile platform for Maharashtra engineering CAP counseling, enabling students to predict admission chances, forecast college cutoffs, and receive personalized college recommendations based on CET scores, category, and preferences.
- Implemented a microservice-based architecture with a Node.js backend, React web application, Flutter mobile app, and FastAPI AI engine, ensuring scalable, secure, and high-performance communication between services.
- Integrated machine learning models for cutoff prediction and admission probability estimation, an LLM-powered AI counseling chatbot, PDF report generation, mentorship booking, and role-based authentication to streamline the admission guidance process.
- Technology Stack:** React, Flutter, Node.js, Express.js, FastAPI, Python, PostgreSQL, Docker, Nginx, JWT, Machine Learning, OpenAI/LLM APIs.

2.Lawer-AI 2.0 |

[GitHub](#)

- Developed a professional AI-powered legal intelligence platform designed for lawyers and law firms, enabling legal professionals to perform semantic case searches, predict case outcomes, generate standard legal documents, and summarize complex judicial judgments.
- Implemented a modern decoupled architecture featuring a high-performance Python FastAPI backend service and a responsive React web application built with Vite and TypeScript, featuring secure API proxying and persistent local session state management.
- Integrated intelligent decision models for case outcome probability estimation, a template-based legal document generator, an automated judgment summarization parser, role-based access control (RBAC) separating Lawyers and Admins, and system-wide audit logging.
- Technology Stack:** React, Vite, TypeScript, TailwindCSS, Zustand, Axios, Recharts, FastAPI, Python, SQLite, SQLAlchemy, JWT (python-jose), bcrypt.

3.Rajmudra Student Management Platform | (Industry)

[GitHub](#)

4.Explainable-AI-for-DL-Models |

Publications

Published in: 2026 2nd International Conference on Computing, Communication and Green Engineering
DOI: [10.1109/CCGE67142.2026.11581630](#) Publisher: **IEEE** (CCGE)

SKILLS

- Python • C • C++ • Machine Learning • OOP in C++ • DBMS • Basic MERN Stack
- Data Structures & Algorithms (DSA) in C++ • Data Visualization • Data Communication & Computer Networks

SOFT SKILLS

- Problem-solving & analytical thinking
- Curiosity and willingness to learn
- Team collaboration & communication
- Time management & adaptability
